

StrongLoop documentation (deprecated)

StrongLoop Node.js API Platform

StrongLoop's Node API platform consists of:

- [LoopBack](#), an open-source Node application framework based on [Express](#).
- [StrongLoop Process Manager](#) and related tools for working with any Node applications to:
 - [Run and debug](#) locally.
 - [Profile CPU and memory consumption](#).
 - [Build and deploy](#) for production.
 - [Scale to multiple processes and across multiple server hosts](#).
 - [Perform logging](#).
 - [Monitor performance metrics](#).

If you're ready to take your API to the next level, [LoopBack support is now built-in to IBM API Connect!](#)

Please see the loopback.io for the latest [LoopBack](#) documentation.

NOTE

StrongLoop Arc and `slic` are no longer under active development, and will soon be deprecated. Arc's features are being included in the [IBM API Connect Developer Toolkit](#): Please use it instead.
